

CAPABILITY STATEMENT

About Us

Smart Video & Sensing Ltd, known as SVS, is a privately owned ambitious and innovative company specialising in the provision of a variety of detection and sensing solutions. We have over 15 years' experience across a range of transportation and security sectors including urban and inter-urban roads, rail and waterways.

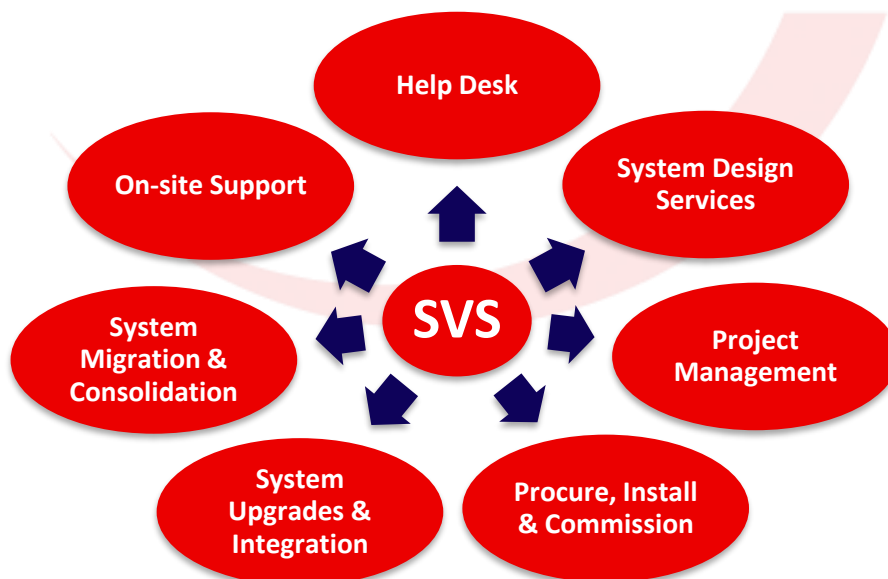

Our product portfolio includes CCTV image processing, ANPR, radar, Bluetooth/Wi-Fi, acoustic detection and laser technology.

Maintaining our core values of innovation and client satisfaction, we work both collaboratively and in partnership with our clients. Our suite of services includes consultancy, design, provision, training and maintenance of the latest detection and sensing solutions which form our core competencies.

We believe that we clearly differentiate ourselves against our competitors through our execution culture; our people and our aim to create a successful outcome for our clients. We are the company behind your company and provide a seamless extension to your organisation.

SVS is certified to ISO9001 and ISO 27001.

Past Performance

- Designed a complete automation package to a SIL safety standard for the Sandfield Bridge on the Gloucester-Sharpness Canal. Integrated laser, CCTV, VoIP, RoIP and Wi-Fi technology with traffic signals to fully automate the opening and closing of this busy road bridge using a mobile app.
- Designed and installed a Bluetooth/Wi-Fi detection system in Portsmouth to provide journey time information allowing for more efficient traffic management.
- Provided ANPR access control to a number of sites in the south of England for Yodel Distribution.
- Provided ANPR to weigh bridge applications throughout the UK to capture vehicle identification.
- Installed and maintain high level security system to a major road-bridge on A14 trunk road in England.
- Undertook traffic and pedestrian surveys on a series of level crossings in south of England.
- Upgraded three major Welsh road tunnels on the A55 trunk road with a video incident detection system covering 57 cameras.
- Installed a new video incident detection system in Baldock Tunnel, Hertfordshire.
